## Choose Us

Semiring's Data Analytics AI and NLP technologies turn hidden business data into actionable information and knowledge.

We map relational databases, unstructured text, objects in images, into high-quality Knowledge Graphs.

We offer powerful systems to automate business data processes and provide deep semantic analytics and Knowledge Graph technologies.

## Our Services

- Deep semantic Natural Language Processing analytics of unstructured text in a wide range of languages.
- Extraction of knowledge graphs and networks of entity relations from text, images, and data.
- Custom AI and NLP models, software components, and services for domains such as FinTech, Medical, Business, Legal, Forensic, and Cybersecurity.
- Our technologies are ready for use in HIPAA, FERPA, FedRAMP environments, with highest security and privacy restrictions, and meta-data protection.
- Cloud-services for full integration of AI, NLP, and Data analytics adapted and tuned to customer needs.
- On-premises systems for maximal security and privacy of content, data, analytic results, and models.
- High-performance scalable technologies for Very Big Data analytics.
- Modular architectures for rapid adaptation to new domains or data sets.
- Full integration into common business and technology infrastructures.
